

Cashless reader vending

VMC's Metro cashless readers offer a range of interface options to enable cashless payments on vending machines, photocopiers, launderette and computer equipment.

Metro systems are compatible with the latest smartcard technologies including Mifare, iCLASS, LEGIC and contact chip. The large backlit LCD graphics display personally welcomes users clearly displaying the users name, cash balance and any subsidies that may be available to spend. With the addition of a coin mechanism, the reader will support 'on-machine' revaluation, as well as coin pay vends.

Converting vending machines from coin to cashless removes the major cause of breakdown - coin jams.

Features Summary

- Euro ready
- Compatible with 'contact' or 'contactless' cards/keys
- Clear backlit LCD display for personalised greetings and customer instructions
- Card/Key deposit management feature
